The focus of the book is on the three disciplines of biomechanics, physiology and psychology: - Biomechanics: using mechanical principles to understand human movement and how the human body interacts with equipment and apparatus - Physiology: using biological sciences to investigate how the body responds to exercise and training - Psychology: using psychological principles to provide answers to questions about human behaviour in sports settings This new edition has been updated to include case studies to show what you can do with a sports science degree and advice on how to prepare for careers where sports science knowledge is used. It includes chapters on the key systems in the body - skeletal, muscular, cardiovascular and nervous - as well as covering sports nutrition and planning research in sport.
