Mindfulness Among Students Atefeh Ahmadi, 2016-10-05 This book utilizes quantitative research methods to identify the relationship between the level of mindfulness and demographic factors among university students in Malaysia. More specifically, it explores the mindfulness, its benefits and relationship with demography, and the field of study of university students. While Mindfulness Attention Awareness Scale questionnaire (Brown & Rayan, 2003) was used for the quantitative approach, findings in the book were also ascertained through descriptive and co-relational statistics test. The research presented in the book moves beyond the individual level of mindfulness towards "organizational mindfulness", and will be useful for psychotherapists, high school counselors and teachers.

COVID-19, Education, and Literacy in Malaysia Ambigapathy Pandian, Surinderpal Kaur, Huey Fen Cheong, 2021-10-27 Part of a mini series of Focus books on COVID-19 in Malaysia, the chapters in this book address the pandemic's impacts on education and literacy. Covering a range of teaching and learning challenges impacting learners and teachers, the contributors highlight the pervasiveness of the pandemic on Malaysian society and how Malaysians have found ways to cope. They focus mainly on students' COVID-19 narratives, digital and health literacy issues, language and new vocabulary. This is an opportunity to witness how researchers from multiple disciplines can join forces during challenging times. There are a great many lessons to be learned from the successes and failures in responding to the pandemic and the measures that have been necessary to contain it. A fascinating read for scholars and educators with an interest in crisis management in non-Western contexts, especially those with a particular interest in Malaysia, or Southeast Asia more generally.
