Financial Informatics Dorje Brody,L. P. Hughston,Andrea Macrina,2021-12 The Brody-Hughston-Macrina approach to information-based asset pricing introduces a new way of looking at the mechanisms determining price movements in financial markets. The resulting theory of financial informatics is applicable across a wide range of asset classes and is distinguished by its emphasis on the explicit modelling of market information flows. In the BHM theory, each asset is defined by a collection of cash flows and each such cash flow is associated with a family of one or more so-called information processes that provide partial information about the cash flow. The theory is highly appealing on an intuitive basis: it is directly applicable to trading, investment and risk management - and yet at the same time leads to interesting mathematics. The present volume brings together a collection of 18 foundational papers of the subject by Brody, Hughston, and Macrina,

many written in collaboration with various co-authors. There is a preface summarizing the current status of the theory, together with a brief history and bibliography of the subject. This book will be of great interest both to newcomers to financial mathematics as well as to established researchers in the subject.

**Precedents in Zero-Energy Design** Michael Zaretsky, 2009-10-15 'Michael Zaretsky's Precedents in Zero-Energy Design is such an important book ... it will help readers recognize that design comes before technology - and renewable energy systems alone can't solve the problems we face' - John D. Quale, Assistant Professor of Architecture and ecoMOD Project Director, University of Virginia The world is currently facing an environmental crisis and as anyone interested in sustainable or zero-energy design knows the design and building industries have the potential to significantly reduce greenhouse gas emissions across the globe. The Solar Decathlon is an international event in which universities from around the world compete in the design and construction of a one-bedroom, zero-energy house. This book provides an in-depth, yet accessible analysis of the architecture and passive design strategies of the houses in the 2007 Solar Decathlon. These houses are the result of thousands of hours of research and development from twenty universities around the world. Divided into three parts, the book provides: an initial section investigating the architecture, passive design and systems layout of the twenty houses; a diagrammatic comparison of the architecture and passive design characteristics of each of the twenty houses in order of ranking by the Architecture, Comfort Zone and overall scores received in the competition; a deep analysis of the relationship between architecture, passive design and mechanical systems design as compared to the rankings received in the various contests. This analysis considers the decisions made by the competing teams and highlights the success of the design strategies employed. Students, educators, practitioners and researchers of architecture, design and engineering will find this an informative and inspirational book. It examines the relationship between design and environmental principles and provides invaluable insight into some of the most innovative, off-the-grid and zero-energy houses in the world. With a Foreword by John D. Quale, Assistant Professor of Architecture and ecoMOD Project Director, University of Virginia

**The Urban Fix** Douglas Kelbaugh, 2019-04-01 Cities are one of the most significant contributors to global climate change. The rapid speed at which urban centers use large amounts of resources adds to the global crisis and can lead to extreme local heat. The Urban Fix addresses how urban design, planning and policies can counter the threats of climate change, urban heat islands and overpopulation, helping cities take full advantage of their inherent advantages and new technologies to catalyze social, cultural and physical solutions to combat the epic, unprecedented challenges humanity faces. The book fills a conspicuous void in the international dialogue on climate change and heat islands by examining both the environmental

benefits in developed countries and the population benefit in developing countries. Urban heat islands can be addressed in incremental, manageable steps, such as planting trees and painting roofs white, which provide a more concrete and proactive sense of progress for policymakers and practitioners. This book is invaluable to anyone searching for a better understanding of the impact of resilient cities in the monumental and urgent fight against climate change, and provides the tools to do so.

*The Beautiful Land* Alan Averill, 2013-06-04 Takahiro O'Leary has a very special job... ..working for the Axon Corporation as an explorer of parallel timelines—as many and as varied as anyone could imagine. A great gig—until information he brought back gave Axon the means to maximize profits by changing the past, present, and future of this world. If Axon succeeds, Tak will lose Samira Moheb, the woman he has loved since high school—because her future will cease to exist. A veteran of the Iraq War suffering from post-traumatic stress disorder, Samira can barely function in her everyday life, much less deal with Tak's ravings of multiple realities. The only way to save her is for Tak to use the time travel device he "borrowed" to transport them both to an alternate timeline. But what neither Tak nor Axon knows is that the actual inventor of the device is searching for a timeline called the Beautiful Land—and he intends to destroy every other possible present and future to find it. The switch is thrown, and reality begins to warp—horribly. And Tak realizes that to save Sam, he must save the entire world...
